

# CRITICAL\_STRUCTURE\_CORRUPTION Blue Screen error in Windows 8.1 or 10

This is a new Blue Screen that has popped up with Windows 8.1. It was technically possible to get this error before now, but it was exceptionally rare.

Critical Structure Corruption means that the kernel, or core of your operating system, has found critical corruption in itself or data associated with it. It often appears when you run emulation software within Windows. That is, you're attempting to run another OS on top of Windows in a virtual environment.

Solution: Download and Install SPTD for Windows 2000/XP/2003/Vista/Windows 7/Windows 8/Windows 8.1
