

Network profile from Public to Private

To change your network profile from **Public** to **Private**, select the instructions below based on which computer you are currently using.

On the Windows 11 Desktop

1. Click the **Start Menu** and open **Settings** (the gear icon).
2. Click **Network & internet** on the left sidebar.
3. Click on **Wi-Fi** or **Ethernet** at the top, depending on how your PC connects to the internet.
4. Click on your **Network Name** (SSID) to open its properties.
5. Under **Network profile type**, select **Private network**.

On the Windows 10 Desktop

1. Click the **Start Menu** and open **Settings**.
2. Select **Network & Internet**.
3. Click on **Status** in the left sidebar, then click **Properties** under your active connection.
4. Under **Network profile**, switch the selection from Public to **Private**.
